Summary

Full-Stack Software Engineer experienced in developing scalable web applications, RESTful APIs, third-party integrations, and real-time systems. Skilled in Node.js, Python, PostgreSQL, React, and Docker, with hands-on experience building production SaaS features applications. Focused on clean architecture, secure integrations.

Experience

Full-Stack Developer Intern — Agadir, Morocco
Brandiha — *Feb 2026 – Jun 2026*

- **Integrations:** Integrated **Shopify**, **WooCommerce**, and **YouCan** with a centralized SaaS platform, enabling merchants to manage eCommerce orders from a single system.
- **API Development:** Developed a **WordPress plugin** that automatically synchronized landing-page orders with the platform through REST APIs, eliminating manual order entry.
- **Order Management:** Implemented order processing, shipping workflows, and delivery ticket generation to streamline merchant fulfillment operations.
- **Security:** Integrated **Google OAuth** for secure authentication and third-party account connections.
- **Frontend Architecture:** Refactored the application into reusable **React** components and custom hooks, reducing duplicated frontend code by approximately **25%**.
- **Observability:** Implemented API logging and structured error tracking, improving debugging and monitoring of third-party integrations.
- **Production:** Collaborated with the development team on production issues, performance improvements, bug fixes, and new merchant-facing features.

Education and Certificates

UM6P – 1337 School (42 Network) — Ben Guerir, Morocco
Architect in Digital Technologies — *2023 – Present*
Boot.dev Certificates — Online
Python, SQL, Kubernetes & Artificial Intelligence

Technical Skills

Languages: C/C++, Python, TypeScript, JavaScript (ES6+), Node.js, SQL, HTML/CSS
Frameworks/Libraries: React.js, Fastify, Express, TailwindCSS, OpenAI API (GenAI)
Developer Tools: Git, Docker, Docker Compose, Nginx, Postman, Linux/Unix
Databases & Networking: PostgreSQL, MariaDB, SQLite, WebSockets, HTTP/HTTPS, JWT
Languages Spoken: English, Arabic, French

Projects

LetsBuyTogether | *React, Node.js, Express, PostgreSQL* — Aug 2026 – Present

- Built a **group-buying platform** where users discover store promotions, create offers, and find other users interested in joining the same purchase.
- Designed a secure group-purchase workflow with **payments and group management**, helping users coordinate purchases and reduce the risk of scams.

Kubernetes Infrastructure | *Kubernetes, K3s, Vagrant, Linux* — Aug 2026 – Present

- Built a multi-node **Kubernetes cluster** with Vagrant, configuring control-plane and worker nodes.
- Deployed applications using **Deployments, Services, ConfigMaps, and Ingress**traffic routing, and application configuration.

Real-Time Multiplayer Game | *Fastify, WebSocket, React, SQLite* — Sep 2025 – Nov 2025

- Built a real-time multiplayer platform on **WebSockets**, focused on keeping latency low during live matches.
- Added an automated tournament engine with live scoring and rankings that update as matches finish.
